DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-11, 14-16, and 19-21, and 24-26 are drawn to have an apparatus for displaying a plurality of preview images with different resolution levels, each in parallel to one another and also output preview images from the print job.

Group II, claim(s) 12, 17, and 22 are drawn to generating a unit for showing progress for the preview generation of a preview image to print.

Group III, claim(s) 13, 18, and 23 are drawn to provide a unit to input a command to stop the process for outputting preview images to print.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has a separate utility that allows the user to view up to three different modes at once all in parallel without requiring use of a progress bar for the generating a preview image. See MPEP § 806.05(d).

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has a separate utility such as being able to display several preview images in parallel with various resolution levels without requiring letting the user stop the image from generating a print preview image. See MPEP § 806.05(d).

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has a separate utility such as having a progress bar for generating print preview images without allowing the user to stop the preview image from generating. See MPEP § 806.05(d).

The inventions are distinct, each from the other because of the following reasons:

A telephone call was made to John Mattingly on June 3, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vincent Rudolph whose telephone number is (571) 272-8243. The examiner can normally be reached on Monday through Friday 8 A.M. - 4:30 P.M.
